

I CAN REST
EASY KNOWING
THAT I'M ON TOP
OF MY CHRONIC
HEARTBURN

I asked my doctor
about WATS^{3D}

WATS^{3D}TM

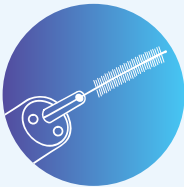

What's the connection between heartburn and esophageal cancer?

If you have persistent heartburn or chronic acid reflux, also known as GERD, your doctor may have discussed the need for an endoscopy to look at your esophagus. GERD can lead to a precancerous condition known as Barrett's esophagus, which, in a small percentage of people, may progress to esophageal cancer if left unchecked.

Early detection is key. When unhealthy, precancerous cells are detected early, they can be removed before they can turn into cancer.

WATS^{3D} can help your doctor manage your esophageal health.

Here's how it works

During your endoscopy, your doctor will collect a tissue sample using a special brush-like instrument.

Your sample will then be sent to the CDx Diagnostics lab for analysis.

CDx is the only laboratory that can process WATS^{3D} specimens.

A team of CDx pathologists will then carefully evaluate your tissue sample assisted by proprietary 3D imaging and AI technology and provide a diagnosis to your doctor.

Your health is important. WATS^{3D} is a simple procedure.

The collected cells are sent to the CDx lab for special analysis. CDx then provides your doctor with diagnostic information to better manage your health.

Take charge of your health.

According to the ASGE, approximately 10% to 15% of patients with acid reflux develop Barrett's esophagus, which can sometimes lead to esophageal cancer.

Esophageal cancer is one of the fastest-growing cancers in the United States. With WATS^{3D}, you and your doctor can stay ahead of any hidden danger.

ASGE=American Society for Gastrointestinal Endoscopy;
GERD=gastroesophageal reflux disease

Insurance coverage for your WATS^{3D} biopsy procedure.

CDx directly bills your medical insurance carrier for its analysis. The CDx laboratory is currently in the process of becoming an in-network provider with most medical insurance plans. In the meantime, you will not be responsible for out-of-network fees associated with these plans.

What this means for you

In-network plans: If CDx has a contract with your medical insurance carrier, we are contractually obligated to bill standard copays, coinsurance, and/or deductibles that your plan views as patient responsibility. These plans include Medicare and Medicare Advantage.

Out-of-network plans: If CDx does not have a contract with your medical insurance carrier, you will not be responsible for amounts that your insurance plan does not cover. Out-of-network insurance carriers have been notified about our billing policy.

Following the WATS^{3D} procedure, you will receive an explanation of benefits (EOB) from your insurance carrier. **The EOB is not a bill.** If we are required to collect a payment from you, please wait to make a payment until after you have received an invoice from CDx.

In addition, some insurance carriers will send payments for CDx's laboratory services directly to you as the insured/policyholder. If you receive a payment from your insurance carrier for our services, you do not need to wait for an invoice. Instead, simply forward that payment with a copy of the EOB to:

CDx Diagnostics, Inc.

PO Box 5124

White Plains, NY 10602-5124

Should you have any billing questions, please contact our billing support team at **833-539-9700**

Ask your doctor how WATS^{3D}
can help you stay on top of
your chronic heartburn.
